OPPORTUNITIES WITH
PRINT EMBELLISHMENT

What is print embellishment?

Print Embellishment is the method of printing a clear, raised pattern to a sheet giving it a textured feel, creating a tactile and premium experience.

Duplo's DuSense, print embellishment range enables print providers to emboss digitally. By printing, then exposing a clear varnish to ultraviolet (UV) light which bonds and cures instantly, printers can affordably and flexibly offer added value to business cards, packaging, booklets and more.

Rather than flood coating the entire surface, use spot UV to highlight key details on your print design, like a logo or contact address. Mimic textures such as leather or water and build contrast between raised and matte surfaces that will instantly create a luxurious product that inspires and drives better engagement.

What's the value in print embellishment?

Demand for premium print continues to rise, brand owners and marketers want luxury print and packaging solutions that will make their products stand out. Benefits of embellishment in print include differentiation, perceived value, customer experience and improved response rates - and they are willing to pay a premium for it.

DuSense DDC-8000

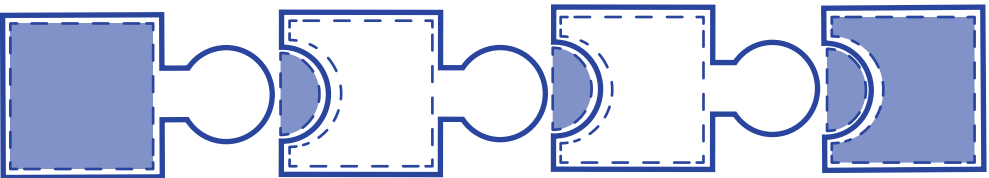

The DuSense DDC-8000 takes spot UV coating and embellishment to a whole new level, both in terms of paper formats it handles, and the range of high quality raised effects it delivers.

Excellent quality and accuracy for fine details, with capability to print multiple thicknesses in one pass

Modular so you can upgrade to grow with your business.

The DDC-8000 has four different configurations; Essential, Foil, Pro and Ultimate. All fully automated and compact, within a footprint of 6.6m.
